

Impersonation risk evidence report: SpaceX

Generated 2026-10-18 23:22 Qatar (UTC+3). Coins observed 2026-10-16 19:41 to 2026-10-18 19:49 UTC. Watched names: space exploration technologies, space x, spacex, spacex inc, starlink; tickers: SPCX.

Important. This report lists tokens that our automated rules *flagged* as likely impersonating the brand named above, based on public blockchain and market data. Flags and risk scores are probabilistic signals for human review. They are not legal findings, and not allegations that any token creator, wallet holder or other person committed fraud, infringement or any other wrongdoing. Wallet addresses are pseudonymous on-chain records; we do not know who controls them. Some flagged tokens may be parody, commentary, fan or authorised projects. Verify independently before acting. Not investment or legal advice. The brand owner has not endorsed, reviewed or sponsored this report and is not affiliated with us; brand names and trademarks belong to their owners. Corrections: admin@deepcounterfeit.com.

Flagged coins (likely impersonation)	78
High severity (risk 70+)	1
By pattern	exact clone 77, official claim 1
Trading volume through these coins (USD, on bonding curve)	\$181,074
Wallets that traded them (sum per coin)	573
Distinct creator wallets	36
Coins that graduated to a DEX	16
Coins where creator bought 50%+ of supply at launch	16
Brand mentions not counted as impersonation (memes using the name)	2

Method. Every new token on the covered venues is matched against the brand watchlist (name, legal name, ticker, typo variants, "Official"/"Inc"/"xStock"/"PreStocks"/"tokenized" wording). Matches that only reference the brand inside a meme are excluded from this table. Risk adds creator behaviour (share of supply the creator bought in the launch block, other wallets buying in the same block, volume, traders, graduation, creator net SOL withdrawn, serial launches). All figures come from on-chain trades we recorded (Solana logsSubscribe for pump.fun) or public APIs (GeckoTerminal, DexScreener). Volume is bonding-curve trading only; post-graduation DEX trading is not included, so figures are lower bounds. Creator net SOL = SOL received from the creator wallet's sells minus SOL spent on its buys on the curve; a negative value (e.g. -85 SOL when the creator bought the whole curve) means the creator still held the supply when the coin moved to a DEX, where later sales are not covered here. This report is evidence for review, not a legal opinion.

Cases (78, highest risk first)

Important. This report lists tokens that our automated rules *flagged* as likely impersonating the brand named above, based on public blockchain and market data. Flags and risk scores are probabilistic signals for human review. They are not legal findings, and not allegations that any token creator, wallet holder or other person committed fraud, infringement or any other wrongdoing. Wallet addresses are pseudonymous on-chain records; we do not know who controls them. Some flagged tokens may be parody, commentary, fan or authorised projects. Verify independently before acting. Not investment or legal advice. The brand owner has not endorsed, reviewed or sponsored this report and is not affiliated with us; brand names and trademarks belong to their owners. Corrections: admin@deepcounterfeit.com.
